

Bolts of bolt anchors

Currently there is a worldwide, huge shortage of bolts. Bolts that we use in the production of our bolt anchors. We want to make sure that we can continue to provide bolt anchors. Therefore we will - in addition to our standard untreated bolts that you expect from us - temporarily apply either electrolytically galvanized bolts or bolts of which the wire continues until the head. From today we will deliver the different versions of the bolt anchors pell-mell.

The anchors in question are:

- Bolt anchors 1988 EV , TV, A4 and A4-80
- Bolt anchor with plastic nailing plate 1985 EG
- Plate anchors 1980-P EV, TV, A4 and A4-80

We expect a recovery from this unusual situation at the start of the fourth quarter 2011.

The measure will not have any impact on prices for the customer. Also, the different bolts will not affect the strength and the trusted quality that you expect from DEMU.

If you have questions concerning this matter, please feel free to contact our Sales and Marketing Manager, Ing. Karin van Kuffeler, Tel. +31 (0)30-2412421.

EV: Electrolytically galvanized

TV: Hot dipped galvanized

A4: Stainless steel A4 316, 316L, 316 Ti, class 50

A4-80: stainless steel A4 (316, 316L, 316 Ti), class 50
